Good Day,

As discussed, I would like to get in touch with you regarding the free AWS training workshop program for your college that will be helpful for the students who are learning and growing their skills in a cloud environment and cloud adoption. Also, I would like to contribute and start something for the betterment of people and my team.

Cloud computing is one of the most powerful technologies in the world, and it's playing a bigger and bigger role in how organizations store, process, and share their data.

With the demand for Cloud-related skills set to skyrocket, it is essential that students, educators, and employers are all made aware of the benefits of working in the industry. That's why we're going to be holding a series of awareness sessions for students and their teachers.

With this interactive session, students will learn about the different types of cloud computing services available today, how to navigate and manage them, and how to leverage them for any organization's needs.

I and my team are AWS-certified working professionals as well as AWS community builders and will plan this workshop as a comprehensive training program that not only teaches the theory but also provides practical demonstrations of how to use AWS services.

Topics are as follows

Initial draft -

Cloud awareness session

AWS; an overview.

Cloud Deployment Models.

How AWS works and its Global infrastructure.

Different roles and responsibilities in Cloud.

Getting started with AWS free tier resources.

Basic services around Compute + Storage + Networking + Monitoring + Security + Analytics

Getting Started with AWS in real life.

How to develop basic applications using AWS cloud services with SDKs and Console

Best practices to follow while developing.

Sample exam questions

Students will also get a chance to earn free certification vouchers from AWS.

After this free workshop, we will be gathering the inputs from students and plan to cover cloud practitioner certification level knowledge as per student's demands and college permits; after that certification training will be paid for, and will plan the training in the most cost-efficient way!

Please let me know for further discussions.

Place: Virtual/In-person as per availability

Date: Best date suits college and us.

Duration: 3+ Days
